

## TAPE TRACKING AND MANAGEMENT SOFTWARE

**TAPEMANAGER** from Dynamic Solutions International simplifies your operations by automatically tracking all tape and optical backup media. TapeManager provides security to all tape and optical technologies available on Unisys MCP-based systems.

### FUNCTIONALITY:

TapeManager logs tapes real-time and tracks tapes stored both on-site and off-site. In recovering a database, TapeManager supplies tapes requested by DM Utility, removing any guesswork. In conjunction with an automated tape library, TapeManager automates data recovery without operator intervention.

### SECURITY:

TapeManager protects tapes from accidentally being scratched or over-written. The TM SECURE command limits access to sensitive functions at various levels, including User Code, ODT, and even by particular Station Name(s).

### EASE OF USE:

All commands are entered through the console just like other system commands. There is no need to look up job or mix numbers. Help screens are available at the console.

### HELP:

TapeManager also includes a utility program that follows the standard A Series (MARC) presentation with menus and forms, aided by on-line help. TapeManager offers on-line help following the standard MCP implementation. A hyper-text-like capability allows users to request help for unknown items while in help mode by SPCFYing on the item.

### BENEFITS OF A SCALABLE MEDIA MANAGEMENT SYSTEM

Beyond improved availability of information and faster recovery in emergency situations, TapeManager offers the following advantages:

### RELIABLE, UNATTENDED MEDIA TRACKING:

Media management software reduces the cost and increases the accuracy of tracking media. TapeManager protects your company's data assets without any human interaction, which in turn, frees your staff to focus on more important tasks.

### REDUCED SYSTEM DOWNTIME:

Most companies must remain on-line all the time. In the event that a restore is required, TapeManager will aid in the data-rebuilding process, allowing you to recover quickly.

### INVESTMENT PROTECTION:

TapeManager expands to accommodate more media, more hosts, new features and functionality, ensuring your investment will serve you for years to come.

### FEATURES AND BENEFITS:

- ✓ TapeManager's database updates in real-time as tape activity occurs across one or more hosts
- ✓ Operator console (ODT) command and response; no AX or SM required
- ✓ Custom reporting provided in hard-copy at terminals, to disk, or e-mail
- ✓ Ad hoc reports available in both Word and Excel
- ✓ Customizable label printing interface
- ✓ Multi-host database and config support
- ✓ MARC, DCKEYIN, batch and REMOTE-SPO all accept TM commands
- ✓ Selective cartridge tracking by pattern or number
- ✓ Data protection
- ✓ Extensive searching capabilities locate tapes automatically
- ✓ Advanced searches via "wildcards"
- ✓ Exception activity automatically logged and reported
- ✓ Command line interface makes TapeManager user-friendly

### REQUIREMENTS:

- ✓ MCP 47.1 or later
- ✓ MT/ET equivalent terminal or terminal emulator
